

Automatic watch 1-4

In the automatic watch 1-4 we find an original design in the exterior and also in the interior of the case. There is one central stainless steel disk surrounded by a carbon fiber disc and another external disc with orange arrows pointing to one more disk where we find the minutes marked with orange numbers. The hours are marked in the right side of the internal stainless steel disk where the corresponding hour appears with an orange number. The carbon fiber layers used for the discs are one of the thinnest you can find in the market. The automatic watch 1-4 presents a special design concerning the hands of the watch. These have a very innovative design. They are not like the regular hands you usually find in watches. They are black and orange at the point and they have a sophisticated shape different to classic hands in watches. All this gives the automatic watch 1-4 a very special touch.

The automatic watch 1-4 has a stainless steel bezel that contrasts with the black color of the carbon fiber discs. The crown is also stainless steel and black and it has the logo of FelDO. The case is of a big size according to the last trends in the market of watches, and it is also black and stainless steel in the sides.

The automatic watch 1-4 presents an attractive combination of black, orange and stainless steel colors. The crystal of the automatic watch 1-4 is also special and very resistant. It is made of such a crystal that you will not even notice that it is there. What you will be able to see clearly is the logo of FelDO. In the back part of the automatic watch 1-4 you have the number of the model you have bought and the symbol of FelDO.
